## FACTS ON COVID-19

“The only means to fight the plague is honesty.” — Albert Camus, 1947

### **PCR TEST FALSE POSITIVES**

The nasal or throat mucus swab COVID-19 test, also called the PCR (Polymerase Chain Reaction) test, is the primary method recommended by the FDA and the CDC to determine if a patient is infected with COVID-19.

#### **FALSE POSITIVE PROBLEMS**

The PCR test was found to be 100% incorrect in a past false positive epidemic at Dartmouth.<sup>1</sup>

#### **PCR NOT VALID FOR DIAGNOSING DISEASE**

Kary Mullis, Ph.D., who won the Nobel Prize in chemistry in 1993 for inventing the PCR test, stated in 2013 that this test should never be used to diagnose disease.<sup>2</sup>

#### **FAUCI ADMITS FATAL FLAW**

Anthony Fauci, MD, states that the PCR test is useless and misleading when it is run at “35 cycles or higher”. However, the FDA recommends that the test be run up to 40 cycles, and the WHO is set to 45 cycles.<sup>3</sup>

### **MASKS INEFFECTIVE**

The CDC has recommended that everyone over age two should wear masks in public to protect yourself and others from contracting COVID-19.

#### **85% OF COVID-19 PATIENTS WORE A MASK**

The CDC recently revealed that 85% of COVID-19 patients wore a mask in the 14 days preceding their illness.<sup>4</sup>

#### **NO RESEARCH**

Not a single randomized controlled trial with a verified outcome has been able to detect a statistically significant advantage of wearing a mask versus not wearing a mask, when it comes to preventing infectious viral illness.<sup>5</sup>

## CITATIONS

1. Kolata, G., "Faith in quick test leads to epidemic that wasn't", *New York Times*, January 22, 2007. A huge whooping cough outbreak in 2006 at the Dartmouth Hitchcock Medical Center was based on massive testing with the PCR test. Almost 1000 healthcare workers were furloughed and thousands were given antibiotics and/or the pertussis vaccine. Eight months later the hospital admitted that the entire "epidemic" was due to PCR testing error. Not one whooping cough case was confirmed with a more reliable follow-up test, and it was concluded that health care workers were probably infected with an ordinary respiratory virus like the common cold.
2. Lauritsen, J., "Has Provincetown become protease town?", *New York Native*, December 1996. The PCR test detects for very small segments of nucleic acids that are components of a virus, which is quite different than having an actual infection. Dr. Mullis stated that the PCR test can detect genetic sequences of viruses but not the viruses themselves, and the test should only be used in medical labs for research purposes.
3. Rappoport, R., "Smoking gun: Fauci states COVID test has fatal flaw; confession from the "beloved" expert of experts," *LewRockwell.com*, November 7, 2020; Mercola, J., "Why Covid-19 testing is a tragic waste", *LewRockwell.com*, November 14, 2020. Limiting the PCR test to 30 cycles eliminates 63% false positive Covid-19 cases. Thus, the millions of people diagnosed positive to COVID-19 and added to the "new cases" numbers are simply carrying inactive and insignificant viral DNA that pose no risk to anyone
4. Mercola, J., "Is there really strong evidence for wearing masks?", *Mercola Newsletter*, June 19, 2020. Mask mandates do not help reduce viral spread, and in fact can actually generate harmful side-effects. These include anoxia, or reduced oxygen to the brain and lungs, and hypercapnia, or excessive build up of carbon dioxide. which can trigger headaches, dizziness, disorientation and inability to concentrate, and shortness of breath.
5. Mercola, J., "What will it take for masks and face shields to end?", *LewRockwell.com*, October 10, 2020; Sircus, M., "Wearing masks—A sledgehammer to health", *LewRockwell.com*, July 10, 2020. The WHO has stated that "there is no direct evidence from studies that universal masking of healthy people in the community can prevent infection with respiratory viruses, including COVID-19." A May 2020 paper by the CDC concluded that "Our review found no significant effect of face masks on transmission of laboratory-confirmed influenza"
